

# Technology Corner Profile

Low productivity and a low digitization rate have sparked an influx of new technology being developed, which has the potential to make a profound impact on the risks involved on construction projects and within asset management such as safety risk and design risk. Aon understands that this trend may be of interest to our clients and has created the Technology Corner to profile different construction technology and asset management companies. Each profile gives an overview of the technology, addresses its risk treatment potential, and identifies what insurance policies its implementation could impact. Our goal is multi-faceted to raise awareness about leading construction and asset management technologies that could help reduce risk on site for the purposes of educating our clients and the insurance markets.

## Product Description

Bespoke Metrics' first product, COMPASS is a secure, third party application that gathers, organizes and analyzes Subcontractor data to produce an unbiased assessment of execution ability. The COMPASS system is used as a tool in a General Contractors pre-qualification process.

Centralized data entry allows Subcontractors to satisfy diverse data requests through one system

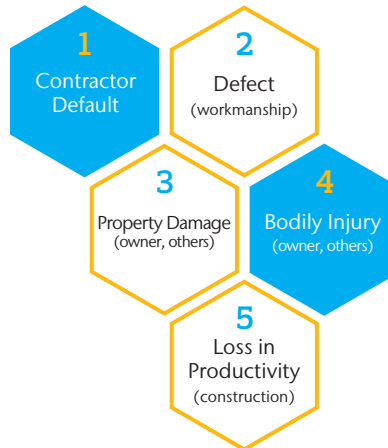

Subcontractors have full authorization control of which entities can view their raw data

Subcontractors will receive a unique COMPASS interface to view their COMPASS output and relative standing within their primary trade type

## Risks Treated

Key risks mitigated by the COMPASS system include:

### Company Profile

## Comments from the Founder

Bespoke Metrics is committed to creating technology solutions that provide empirical truths and unbiased analytical outputs. Through co-development with industry experts, the COMPASS Subcontractor Risk Program transitions Construction experience into data-driven analytics for better decision making and risk management.

As the Construction industry continues to go through rapid technology change, Bespoke Metrics builds technology to integrate with current systems and help our Construction Partners through transition and optimize new tech.

Bespoke Metrics Staff are encouraged to try new things and suggest the impossible.
