

# Technical Expert Testimony and Litigation Consulting Services

---

## Secure Superior Technical Expert Testimony

Elysium Digital provides expert testimony and consulting services in litigation matters involving computer technology. We got our start supporting the DOJ in their antitrust lawsuit against Microsoft in the late 90s. Today, we are part of Aon's Intellectual Property Solutions.

Over more than two decades, we have served more than 200 law firms and 400 companies in over 500 distinct patent, copyright, trade secret, and software contract-focused disputes, from pre-litigation diligence through discovery and trial. Our clients have included Big Law firms, tech companies (ranging from Fortune 500 corporations to small businesses), nonprofit organizations, and government offices and agencies. For a select list of our clients, visit [elys.com](http://elys.com)

## Define the Landscape of Possible Technical Arguments

Our goal is to provide technical insight to both augment existing arguments and help discover new potential arguments, giving you the fullest menu of strategic options and helping you to evaluate the strengths of each. We understand the importance of clear communication and know how to frame compelling narratives about technology to judges and juries to help you present your best case.

## Employ Impeccably Credentialed Experts for the Long Haul

While we know that expert qualifications are important, we also believe that providing excellent service begins well before taking the witness stand. Most of our consultants have degrees from top tier universities, and many of them also have years

of experience supporting experts on intellectual property matters. We're here to meet your team's needs over the course of your entire engagement—whether that means conducting preliminary technical research, developing strategy, or assisting with complex logistics.

## Win Your Case with our Creative Solutions

In the past we have:

- Installed the Doom video game on a medical device to prove that it is a general-purpose computer.
- Configured multiple networked ~1980s era computers with different operating systems for a prior art demonstration at trial.
- Modified and reinstalled source code for the entire build process of Android devices to empirically prove how the source code operated.

## Our Intellectual Property Specialty

We help clients identify, protect, and maximize value from their most valuable assets in today's business world: their intellectual property.

Our experience spans disputes about patents, copyrights, trade secrets, and contracts, and we can help you understand technology issues in the context of the law. You know the law; we know technology.
