

Aon Spectrum Analytics®

Enhancing Aon's Casualty Value Proposition

An innovative product offering that provides risk leaders with an interactive web-based workers' compensation claims dashboarding tool that leverages Aon's Sophi platform and Casualty Laser™ benchmarking - including leading advisory consultation – to identify cost savings opportunities and monitor the performance of pre- and post- loss workers' compensation risk mitigation strategies.

Aon Spectrum Analytics®: Insight through interactive dashboarding

Introduced in 2011, Aon Casualty Laser™ has become the industry-standard approach for organizations seeking metric-driven insight into key performance indicators (KPIs) that drive their casualty cost of risk. Leveraging data, advanced analytics and a unique approach to assessing over 100 multi-variate casualty loss indicators, Aon has evaluated and collected a wealth of data to create our proprietary Casualty Laser™ database.

Utilizing the powerful results and insights captured in our proprietary Casualty Laser™ database, Aon introduces our web-based version of Aon Spectrum Analytics®, an innovative benchmarking tool that provides clients with an unparalleled view of key loss prevention and claims management performance indicators and cost drivers.

Aon Casualty Laser™ and Aon Spectrum Analytics® will now be included as part of Aon's enhanced service delivery for eligible clients to integrate world-class broking with impactful Total Cost of Risk (TCoR) solutions.

Multifaceted, visual approach to identifying cost drivers

Aon Spectrum Analytics® uses a highly intuitive graphical interface, enabling risk professionals to drill down into KPIs that impact their portfolio. Using a powerful interactive dashboard, clients can perform virtual benchmarking of their operations, easily comparing KPIs between regions, locations, or even occupations, resulting in the identification of problem areas within minutes.

Users can choose from multi-variate aspects – organizational, loss profile, benchmarking, cost savings analysis – to generate findings on-the-fly, which provide nearly instantaneous, action-oriented insights that organizations can use to make strategic decisions regarding their casualty risk program. The quarterly delivery allows the user to track performance against stated goals, business expectations and/or financial targets with the support of the Aon consultant assigned to advise accordingly.

In addition to the dynamic dashboard, the Aon Spectrum Analytics® platform provides clients with TCoR advisory services, including targeted mitigation strategies provided by Aon's Casualty consultants. This combination of proprietary benchmarking and advisory services provides an enhanced ability to utilize data to identify and mitigate your core loss drivers.

Aon Spectrum Analytics® reinforces Aon's commitment to Data and Analytics, provides valuable insights, helps improve an organization's risk profile and demonstrates the progress in TCoR reduction. Aon's brokers will utilize these insights to negotiate improvements in risk transfer, financing and collateral, and support marketing efforts.

We're here to empower results
